

PVI Solar Partners With AGS On A New Gateway Solar Sign For “The King Of Prussia Business Improvement District”...

Solar Power Continues To Push Ahead With New Innovative & Creative Design Solutions For Solar Power Applications....

King of Prussia, PA (USA)
February 15, 2013

PVI Solar LLC. partnered with AGS to develop a solar signage solution for the King of Prussia Business Improvement District in February, 2013.

The solar powered sign measures approximately 22 ft. high x 4 ft. in length x 32” depth. The KOP sign consists of internal illumination, push thru illuminated letters with 3M–Day/Night Vinyl & halo effects lighting. The sign utilizes PVI Solar’s proprietary “Powerline™” solar power management system technology. The solar sign system includes a guaranteed sustainability protocol to operate perpetually, for a minimum of 8 days with only one day of sunshine. This system utilizes a 100% off grid configuration.

The King of Prussia Business Improvement District was faced with challenges on how to bring power to the outlying signage. Initial proposals proved very costly. PVI Solar & AGS were able to design a solar solution to resolve this hurdle. In turn it also presented a great opportunity for King of Prussia to exercise their sustainability initiative. This is ultimately a positive step toward implementing a city wide supported Green Initiative.

AGS located in Exton, PA was sourced for the manufacture & installation of the new gateway signs for the King of Prussia Business Improvement District. AGS is an environmental graphics manufacturing firm dedicated to creating products to help people identify, navigate and understand environments. They are experienced and knowledgeable in the sign manufacturing with a main focus on custom sign manufacturing www.agsinfo.com

“The Entire Project was challenging in many ways and allowed us the opportunity to think outside the box and use our cutting edge solar technology.”

PVI Solar and its parent company FALA Technologies www.falatech.com are based in New York’s Mid-Hudson Valley, the emerging solar energy capital of the East Coast. It is creating advanced solutions for solar applications, by providing a broad range of products, including commercial signage and lighting. PVI’s revolutionary power management technology sets a direct course to reliable off-grid power solutions. www.pvisolar.com
